THE YOTTADOTS BIG PICTURE

The centre decides the what. Value streams decide the how.

v0.1 · proposed

The right decisions, at the right level, on time.

WHY

Four problems we see

1 The centre asks for work it cannot see

Deadlines that were never realistic; too much at once.

→ R2 · P2

2 Priorities blur the higher you go

Only about a third of senior managers can name the top three priorities (Sull et al.).

→ R1 · P1 · P11

3 Money replaces choices

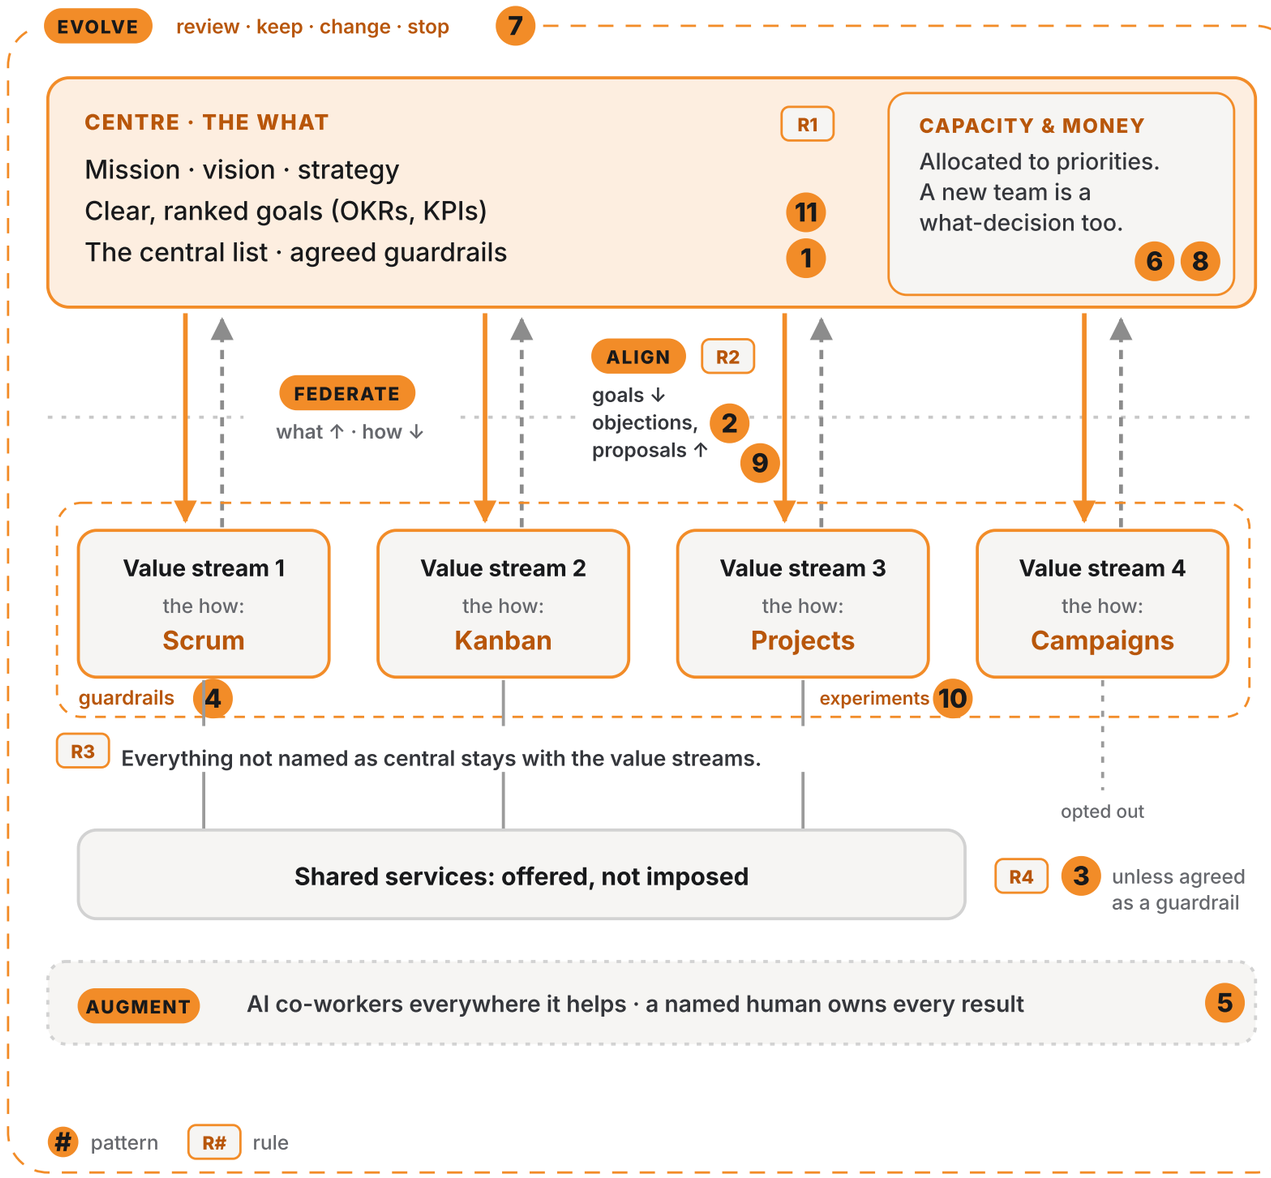

A "no capacity" is answered with another team; budgets are spent, not chosen.

→ P6 · P7 · P8

4 Ideas need the boss's approval

Not invented here, or a threat to the manager's position.

→ R2 · P9 · P10

PRINCIPLES · WHY

Federate
The centre: what. Value streams: how.

Align
Shared goals, shaped together.

Augment
AI makes coordination cheaper.

Evolve
Every design choice is a hypothesis.

RULES · WHAT

- R1 The centre decides the what
- R2 Value streams object, propose, test
- R3 Unnamed stays with value streams
- R4 Opt-out of shared services

PATTERNS · HOW

1. Name what is central
2. Objection round on goals
3. Opt-out of shared services
4. Guardrails that earn their place
5. AI with a human owner
6. Adding capacity is a choice too
7. Usage check: stop what is not used
8. Budgets that do not punish saving
9. Proposal route
10. Experiment budget
11. Decisions on time

A POSSIBLE FIRST ROUTE

proposed · adapt it to your context

1 Name what is central
Publish the short list of what the centre decides.
P1

2 Rank the goals
Clear, ranked goals, with an objection round.
P2

3 Free the how
Value streams choose their own way of working.
R3

4 Open the way up
Proposals answered in writing; experiment budgets.
P9 · P10

5 Sort shared services
Guardrail or optional; few guardrails, each owned.
P3 · P4

6 Review and stop
Guardrails, usage and budgets: keep, change, stop.
P6–P8
